

Hip Dysplasia Coordinator Report

by Jeff English, DVM

As of 25 May 2020, the following DKGNA DK's have been evaluated:

1. Catja von der Niederheide	0951/18	HDA-1
2. Berlin vom Hochland	0856/18	HDA-2
3. Briar von den Seiben Sohnen	0347/17	HDA-2
4. Isobel vom Hidden Creek	0047/18	HDA-2
5. Braya von Hochland	0859/18	HDA-2

The process has been working smoothly, to date, with prompt results from Germany. I would like to remind everyone that positioning is very important when obtaining optimal radiographs, so please go over the results with your veterinarian before he/she reverses sedation on your dog, and also ensure that the required data is on the radiograph. Keep in mind that although I do need your original Ahnentafel for signing when results are in, you can email me good jpeg images (both sides) of the Ahnentafel when you send the radiograph, and as soon as I have payment confirmation, I can send the data on to Germany.

Jeff English, DVM
